DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Jessop et al (6,308,579).

- a. With respect to claim 1, Jessop et al discloses a bond test shear tool incorporating typical features of shear face and blade edge thereof, mounting shank with orienting provision and clearances and rakes to appropriately make contact with ball bonds or bumps 10 for the purposes of shear testing the strength of the bonds of such balls or bumps 10 to their underlying substrates 20,25,27, the improvement wherein said shear tool features an offset 75 that places the shear face beyond interferences to view by normally mounted optics (col. 8 lines 30-38, col. 55-667, col. 14 lines 1-23 {Figs. 5, 6 and 11}).

Allowable Subject Matter

3. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. The following is a statement of reasons for the indication of allowable subject matter: The reason for the indication of allowable subject matter is based on the

inclusion of a bond test system with unobstructed real time views of the shear test and the subsequent sheared test site directly over and normal to the bond test location.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Andrews et al (5,767,414) discloses an aligning tool for a controlled force to an object.

b. Tiegel (4,012,947) discloses a testing apparatus.

c. McKinlay et al (4,957,004) discloses a testing apparatus.
